

Somewhere in the world, a child dies of pneumonia every

## 39 seconds

Source: UNICEF Data

### **Currently...**

Rural and developing areas are the most heavily impacted by pneumonia.

Source: <u>UNICEF Data</u>

Detect signs of pneumonia in chest x-rays using software.

### **Process**

01

#### **Data Exploration**

Preliminary exploratory analysis of the data.

#### **Iterative Modeling**

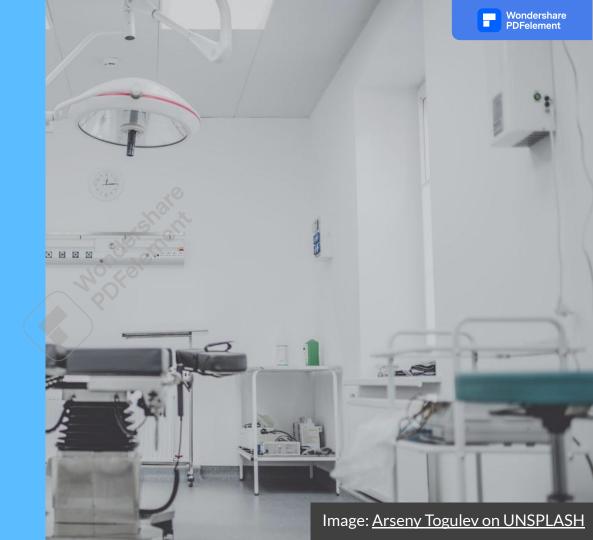

Make basic models & improve upon the best performers.

#### **Validation**

Verify model performance and draw insights from the model.

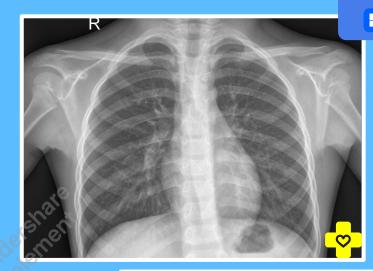

01
Data

# Chest X-ray Data

- 5600 Sick & healthy chest x-rays
- Sick x-rays are over-represented
- Sick includes viral & bacterial pneumonia

Link: Kaggle Dataset

# Training Image Prep.

- ± 45° Rotation
- ± 30% Zoom
- Horizontal Flip

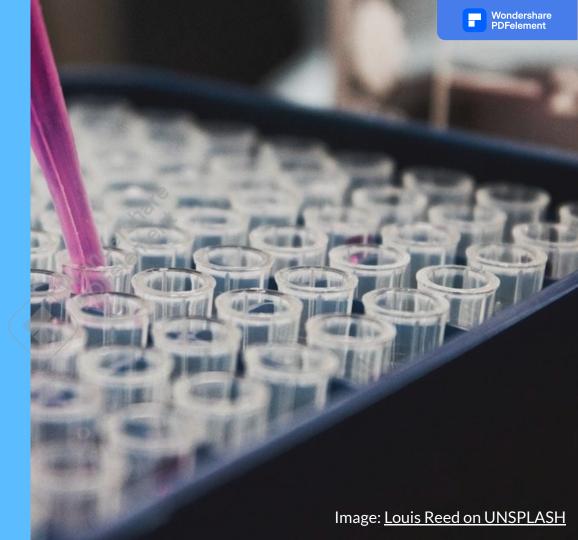

02
Modeling

### Convolutional Neural Network

- Standard for image data
- Automatically detect important features
- Pre-trained networks available as starting point

# Iterative Modeling

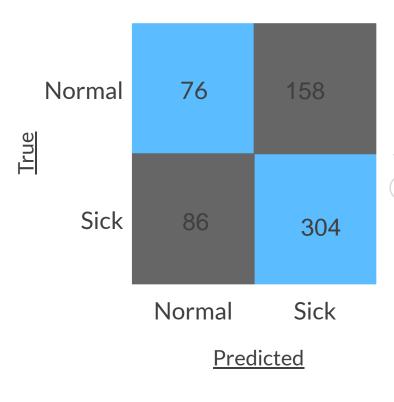

- Learning rate
- Network size
- Dropout
- Pre-trained networks

```
ction(){return
  {var b=[["res
  (){return e.
   fail(c.reject
 2 .disable,b(2)
function(a,b,c){return
fail(g.reject):- 1 return
   -n.readyWait>⊕
www.tatechange",K)
 wentListener("DOMCon
 div"),e.style.c
    1)),c.removeChild
     /^(?:\{[\w\\]*\
     data(a,b,c)}el
    ¶ k&&j [k]&&(e
       e)):b in d?b
       mbed ": 0, "obje
        a:function(a
    melCase(d.slice(5
  Image: Marcus Spiske on UNSPLASH
```

### **Model Results**

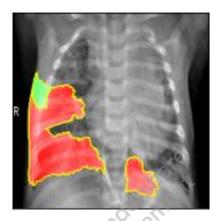

How many model predictions were correct?

03
Validation

# Correctly Predicted As Sick

# Incorrectly Predicted As Sick

# Correctly Predicted As Normal

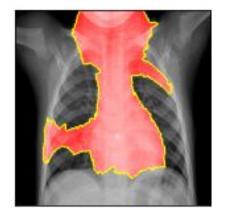

# Incorrectly Predicted As Normal

#### **Data Availability**

More data yields better performance.

### **Interpretability**

"Black box" style model.

#### **Class Imbalance**

Models perform better when data is balanced.

### Future Research

## Types of Pneumonia

Viral and Bacterial Pneumonia appear differently & require different treatments.

Can a similar model detect signs of pneumonia in older patients?

### Various Diseases

Can a similar model be applied to similar diseases?

### Thanks
